

INGLÉS I

Unidad 2 | Clase 5 **Vocabulary**

Clase 5- Vocabulary **Coding Verbs**

What common verbs do you use in coding? Mention the ones you know.

Are they the same in English and Spanish?

Part 1: Match the verbs with their definitions

Match each coding verb with the correct meaning. Write the correct letter.

Verb	Meaning
1. run	a) create code
2. write	b) fix errors
3. debug	c) display something on the screen
4. print	d) check if code works
5. test	e) start a program

Part 2: Fill in the blanks

Complete the sentences with the correct verb from the list.

run – print – write – install – define

I always _____ my code before sending it.

We need to _____ the new software update.

Let's _____ the function called welcome().

Can you _____ "Hello, User!" on the screen?

After writing the code, _____ it to see the result.

Part 3: Choose the correct verb (Multiple Choice)

What verb means to find and fix mistakes in code?

- a) run
- b) debug
- c) call

Which verb means to give a value to a variable?

- a) print
- b) returnc) assign

What do you do to use a function?

- a) call it
- b) save it
- c) open it

Look at a complete list of verbs frequently used in coding

Verb	Meaning / Use in Coding	Example
run	to execute a program or script	Run the code to see the result.
write	to create code	I write Python scripts.
debug	to find and fix errors	She is debugging the program.
compile	to convert code into a machine-readable format	You must compile the code first.
test	to check if code works correctly	Test the app before publishing it.
print	to display information on the screen	Print "Hello World!"
call	to use a function	Call the sum() function.
define	to create a function or variable	Define a new function called greet().
assign	to give a value to a variable	Assign 5 to the variable x.

open to access a file

Open the file data.txt.

save to store changes

Save your script before closing it.

connect to link with a database or API

Connect the app to the database.

update to make changes

Update the software to fix bugs.

Fill in the Gaps: Coding Verbs in a Story

Complete the story below with the correct verb from the box.

Verbs: write – run – define – debug – print – test – install – assign – return – call

Yesterday, Ana decided to start her first Python project. First, she _____ a new function called greet(). Then, she _____ the function so it could show a welcome message.

Inside the function, she _____ the word “Hello!” to the screen.

After that, Ana _____ the value 5 to a variable called x. She _____ another function called double() to multiply a number by 2. The function needed to _____ the result.

She made a small mistake, so she had to _____ the code to find the problem. Once the error was fixed, she _____ the program to see if everything worked. Then, she _____ the software package needed to work with user input.

Finally, she _____ the greet() function and smiled when she saw it working!

☒ **Answer Key:**

Yesterday, Ana decided to start her first Python project.

First, she **defined** a new function called greet().

Then, she **wrote** the function so it could show a welcome message.

Inside the function, she **printed** the word "Hello!" to the screen.

After that, Ana **assigned** the value 5 to a variable called x.

She **defined** another function called double() to multiply a number by 2.

The function needed to **return** the result.

She made a small mistake, so she had to **debug** the code to find the problem.

Once the error was fixed, she **ran** the program to see if everything worked.

Then, she **installed** the software package needed to work with user input.

Finally, she **called** the greet() function and smiled when she saw it working!
