## DOs and DON'Ts in a job interview

# Job Interviews: 5 DOs and 5 DON'Ts for IT Students

Your CV may help you get a job interview, but your performance during the interview can help you get the job. Here are ten useful tips for IT students who want to start their careers as developers, programmers, or IT support technicians.

## Five DOs

**1. Do your research.** Learn about the company, its products, and the technologies it uses. This shows that you are interested in the position.

**2. Do talk about your skills.** Explain what programming languages, tools, and software you know. If you have experience with Python, Java, SQL, or Git, give examples of how you have used them.

**3. Do mention your achievements.** Talk about projects you have completed at university or in your free time. For example, you can describe an application you developed or a database you created.

**4. Do prepare answers to common questions.** Practise explaining your strengths, weaknesses, and career goals. You should also be ready to explain the information on your CV.

**5. Do ask questions.** Ask about the team, the technologies the company uses, or opportunities for professional development. This shows that you want to learn and grow.

## Five DON'Ts

**6. Don't arrive late.** Plan your journey or check your internet connection before an online interview. Try to be ready a few minutes early.

**7. Don't lie about your qualifications or experience**. If you don't know a programming language, be honest. You can explain that you are learning it and want to improve your skills.

**8. Don't speak negatively about previous teachers, classmates, or employers.** Instead, explain what you learned from difficult situations and how you solved problems.

**9. Don't give very short answers.** If the interviewer asks about a university project, explain your role, the tools you used, and the result. Give enough information to show what you can do.

**10. Don't forget your body language.** Avoid looking at your phone or interrupting the interviewer. Listen carefully, speak clearly, and try to appear confident and friendly.

**Remember:** you don't need years of professional experience to make a good impression. Your technical knowledge, willingness to learn, and ability to communicate can help you take your first step into the IT industry.

**Multiple-choice quiz**

**Instructions: Read the text and choose the ONE correct answer (a, b, or c) for each question.**

Question 1 of 6

**1. Why should you research a company before an interview?**

a) To show that you are interested in the position.

b) To avoid talking about your technical skills.

c) To learn the interviewer's personal information.

**2. Which of the following is an example of an achievement you can mention?**

a) The number of hours you spend playing video games.

b) An application you developed for a university project.

c) A programming language you have never used.

**3. What should you do if you don't know a programming language?**

a) Say that you are an expert in it.

b) Avoid answering every technical question.

c) Be honest and explain that you are learning it.

**4. What information should you include when describing a university project?**

a) Your role, the tools you used, and the result.

b) Only the name of the teacher who assigned it.

c) The problems other students had with the project.

**5. What does the expression 'professional development' refer to in the text?**

a) Getting ready to leave a company.

b) Learning new skills and growing in your career.

c) Writing a CV without any work experience.

**6. According to the text, what can help IT students make a good impression?**

a) Having many years of professional experience.

b) Knowing every programming language.

c) Showing technical knowledge, a willingness to learn, and good communication.
