INGLÉS I

Unidad 2 | Clase 7 **Comparing two popular programming languages Python and C**

Comparing two popular programming languages Python and C

You are going to watch a video that compares two very well-known languages: Python anc C. before you watch the video, let's do the next pre-warching exercise:

Pre-watching exercise: Match the following adjectives to their definitions:

Powerful	more difficult and complicated
Easier	to reduce the speed
To slow down	kind and nice
forgiving	more appropriate, more adequate
Harder	simpler, not so complicated
Better suited	with a lot of power

Now, let's watch the video and do the true or false exercise that follows:

Today, we're comparing two popular programming languages: Python and C. While both are powerful, they're designed for different purposes. Let's break down the key difference. Python is known for being easy to learn thanks to its simple syntax that reads almost like English. This makes it a Top Choice for beginners as well as fields like data science, web development and automation. Python is also an interpreted language, meaning it's executed line by line, which can make debugging easier but can slow down performance for complex tasks. On the other hand, C is a compiled language, making it super fast and efficient. C allows low-level memory manipulation, making it ideal for systems programming, embedded systems and applications where speed is critical. However, C's syntax is more complex and less forgiving than Python's so it can be harder to learn for beginners. In terms of use cases, Python is perfect for

applications where rapid development is key such as data analysis, machine learning and scripting. C is better suited for building operating systems, game engines and software that requires maximum performance and control over hardware. So, which is better? It depends. if you're new to programming or working in fields like data science, Python is an excellent choice but if you need high performance and low-level control, especially in systems programming, C is the way to go. Thanks for watching!

True or false? Decide if the following sentences are true or false according to the text/video:

1. Python and C are powerful languages designed for the same purpose T/F
2. Python possesses simple syntax and is easy to learn T/F
3. The C language is super fast and efficient T/F
4. Interpreted languages like C are performed line by line. T/F
5. C’s syntax is more unforgiving than Python’s. T/F
6. When rapid development is key, Python is better than C T/F
7. C is better than Python for building operating systems T/F
8. Python is a great choice if you want to high control and low performance T/F
